Dear Sir:

Few years back. I had purchased one 2½ Inch ID unit (Magnetic) from you.

I used that unit for Red Pumpkin, where increase yield was noted upto 30 to 40%.

In Onion the same increase yield was noted upto 25 to 30%.

This is for your kind information please.

Thanking you,

Yours faithfully

Ashok A. Colaco

Andheri (E)
Mumbai 400 059

Dear Mr. Pramod Vora:

We thought miracles happened only to a chosen few. How wrong I was! It can happen to anyone who wants it. I am referring to the use of your magnetic therapy to the field of Floriculture and Horticulture.

I applied the same treatment of the Orchids I cultivate near Mumbai. The results were sensational and stunning! On your advice, I applied your on-line magnetic on my irrigation system. The results showed excellent result as far as the quality of flowers, the size and quantity of flowers, as well as the extended life of the flowers and flowering pattern. So! It is possible to create our own miracles! Thanks.

Please keep me informed of future developments undertaken by your Company.

For VAL ORCHIDS PVT LTD.

Rudolph J Valles.
Director.

Subject:- Inclusion of Magnetic Fluid Conditioner in Drip as a optional item

Sir,

With reference to the above subject, it is stated that Space Age a supplier of magnetic fluid conditioner device has approached for inclusion of these conditioners as a optional item in drip sets.

The proposal has been discussed in our State Level Committee. Magnetic water conditioners affect the carbonates and bicarbonates and other soluble salt molecules like calcium and magnesium. As unconditioned water passes through a properly designed magnetic conditioning device the principle of magnetic resonance causes the rupturing of breaking apart of clusters of water molecules. It is known that conditioned water can take crystallized calcium carbonate back into solution conditioned water also more easily dissolve other minerals such as magnesium, nitrogen, phosphorous, potassium, etc. which are needed for plant growth. It is mainly helpful for avoiding clogging in drippers., as the complexes of CaCO_3 , MgCO_3 never get formed. The technical booklet is attached herewith.

You are therefore requested that above mentioned device may be considered as a optional item in drip set. The copy of I.I.T. report is enclosed herewith.

Thanking you,

Yours faithfully,

Commissioner, Agriculture

TO WHOM! SO EVER IT MAY CONCERN

This is to certify that Magnetically treated water is capable of dissolving existing Calcium Scale in pipes and nozzles carrying Hard Water and also prevent the formation of new Scale.

I have therefore no hesitation in recommending the Magnetic Water Conditioners of SpaceAge Concepts (India) Ltd, Mumbai 400 059. as essential components of Drip Irrigation Systems for Agriculture

Anjali Sathe
DIRECTOR

Notes added for further research work:

- 1) Sample M = Random sample from grocery store commercially grown with NPK fertilizer.
- 2) Sample F1= Spinach grown with organic manure prepared from cowdung.
- 3) Sample F4= Spinach grown with nutritional soil correction (remineralization) + biomagnetic treatment of water + cowdung manure. This has resulted in growing of "**Nutritionally Super Enriched**" spinach with nutritional levels well above the standard textbook nutritional levels given by USDA.

Observation:

Spinach grown using the principles of Nutritional Farming (soil remineralization + biomagnetics) had almost double the amount of iron, calcium and magnesium compared to commercially available spinach grown using NPK fertilizer.

Justus von Liebig (1803-1873)

Justus von Liebig (May 12, 1803 in Darmstadt, Germany - April 18, 1873 in Munich, Germany) was a German chemist.

Organic Chemistry in its Application to Agriculture and Physiology.
by Justus Von Liebig - 1840

It is probably one of the biggest mistakes in the history of mankind convincing farmers that NPK type fertilizers is the way to go. Justus Von Liebig in 1840 wrote *Organic Chemistry in its Application to Agriculture and Physiology*. Later he repents on his big mistake causing chemical companies to take over and push NPK fertilizers that wind up killing the soil, growing poor quality food and causing a degeneration of health in mass humanity.

Von Liebig even said later:

"I had sinned against the wisdom of the Creator, and received my righteous punishment. I wished to improve his work, and in my blindness believed that, in the marvelous chain of laws binding life on earth's surface and keeping it always new, a link had been forgotten which I, weak and powerless worm, must supply."

—Justus von Liebig, late in life
Quoted from Encyclopedia Britannica, 1899.
(removed from subsequent editions).

Expert Opinion

“A declining soil fertility, due to a lack of organic material, major elements, and trace minerals, is responsible for poor crops and in turn for pathological conditions in animals fed deficient foods from such soils, and that mankind is no exception.”

“NPK formulas, as legislated and enforced by State Departments of Agriculture, mean malnutrition, attack by insects, bacteria and fungi, weed takeover, crop loss in dry weather, and general loss of mental acuity in the population, leading to degenerative metabolic disease and early death.”

Dr. William A. Albrecht, Chairman of the Department of Soils at the University of Missouri.

1992 Earth Summit Statistics

1992 Earth Summit Report indicate that the mineral content of the world’s farm and range land soil has decreased dramatically.

Percentage of Mineral Depletion From Soil During The Past 100 Years, By Continent:

North America	85% *
South America	76%
Asia	76%
Africa	74%
Europe	72%
Australia	55%

* Some U.S. farms are 100% depleted and some are 60% depleted, the average is 85% depletion as compared to 100 years ago. This is worse than in any other country in the world because of the extended use of fertilizers and “maximum yield” mass farming methods.

“In the future, we will not be able to rely anymore on our premise that the consumption of a varied balanced diet will provide all the essential trace elements, because such a diet will be very difficult to obtain for millions of people.”

Dr. Walter Mertz, U.S. Department of Agriculture, told to congress in 1977.

“You can trace every sickness, every disease, and every ailment to a mineral deficiency.”

Dr. Linus Pauling the two-time Nobel Prize winner.

“In the absence of minerals, vitamins have no function. Lacking vitamins, the system can make use of the minerals, but lacking minerals vitamins are useless.”

Dr. Charles Northen, MD

“Minerals are certainly as important to us as vitamins, yet minerals are overlooked, neglected and their value underestimated.”

Gaylord Hauser, from his book, “Diet Does It”

Our illnesses are correlated with our improper stewardship of the land. Our immunity very much parallels the immunity of the land. Of special mention is that trace minerals are much depleted in our soils. Veterinarians have long since known this, which is why there are some 45 trace minerals added to dog and livestock food. They would much rather spend a few cents everyday than hundreds of dollars on vet bills!

Dr. Jensen’s book, Empty Harvest

Naturally Growing Nutritionally Super Enriched Food

It is now well accepted that the over cultivation of land and the use of synthetic fertilizers has depleted the nutrition in the soil and this has resulted in excessively poor nutritional values in our food supply today.

The resulting consequences are a very high incidence of chronic diseases such as high blood pressure, type 2 diabetes, enlarged prostate, hormone imbalance, etc. Those who have accepted this today as an unavoidable fact of life have resorted to the use of supplements to correct their blood reports, in a bid to live a long and healthy life free of chronic diseases.

The question therefore arises, if there is a natural method to correct the nutritional deficiencies in our soil, so that we need not be compelled to take supplements to survive in this period of time that our generation has to live through.

Not only are there are safe natural methods to achieve the correction of the nutritional values of the soil, but there are techniques to naturally grow nutritionally super enriched foods. How to go about doing this and the science behind it is explained in my paper which was read at an international conference in 2006. A lot of valuable information is given here which will be an eye opener for many. In bid to freely disseminate this information to the masses, I give below the link to download and study this peer reviewed paper and trust it will immensely benefit mankind.

<http://www.space-age.com/NutritionalFarmingSeminar.pdf>

The problem the world is facing today is bigger than "global warming" (which will affect the future generations to come), as it has already affected billions of people worldwide and will continue to affect the future generations to come, if it is not identified and corrected at this stage. This information needs to be taken viral for saving mankind and improving the quality of the lives of billions worldwide.

Blessings,

Pramod Vora

Reader's responses:

Bravo...Your philosophy reminds me of Charles Walters' work about using the minerals from the sea to restore our soils. "Fertility From The Ocean Deep" was one of his works, which I have not read, but is referred to in the one I did pour over, Minerals for the Genetic Code.

Thanks for your thinking outside of the chemical box.

Sandra Lowry, CNC

Very informative article which definitely will help to tackle local nutrition problems practically if not totally to some extent.

Some More Clarifications

The process of transferring nutrients from the soil to the ocean has been going on for millions of years. That is the function of rivers that empty into our oceans. But this does not really deplete the nutrients in the soil in any significant manner, as the running waters also bring fresh silt down the mountains to replenish the soil. Periodic floods also remove the depleted top soil. On their way, the running waters gradually grind down the rocks to make silt. That is why all the rocks on the river bed are always rounded. The pounding of river waters gradually convert the bigger rocks to smaller rounded shapes. In these rocks are stored the minerals required to remineralize the soil. The rocks are very ancient and formed long back and can actually return the soil back today to what it was even a few million years back, and probably even further back to the days of the dinosaurs.

This is exactly what I have proposed in my paper, to use rocks to remineralize the soil. This is very quick and efficient method to correct the problems created in the last century, due to over cultivation of land, use of chemical fertilizers and use of pesticide which have killed the micro-organism responsible for providing nutrients to the plants. In addition, this process will naturally create nutritional super charged food which organic farming does not.

The process outlined by me is far simpler than trying to use salt water to extract the minerals, without adding salt back to soil, as salinity will destroy the soil. It is best to use the ocean water to make mineral rich natural salt and use this salt in its natural unrefined form in our diet to replenish our bodies.

Another method commonly used to bring fresh soil rich in nutrients from deep under to the top is earthworms. These earthworms are capable of bringing fresh soil from a depth of 10 to 15 feet to the top. This is a much slower process, but is also a low cost approach, if a period of rest can be given to the land. This rest period is now difficult to allocate, as we have a worldwide soil depletion and over 7.0 billion mouths to feed.

I would be happy to connect up with some volunteer farmers with depleted farm lands who would begin the process of soil enrichment and growing of nutritionally super charged foods for the masses, to take mankind past the point of organic farming and ensuing chronic diseases such as high blood pressure. type 2 diabetes, etc.

For a long and healthy life free from chronic diseases, we have to also ensure that important minerals like magnesium, chromium, selenium, boron, vanadium, molybdenum, the list goes on are also replenished back into the soil. This ensures we have a nutritionally rich food supply and can prevent the manifestation of chronic diseases like high blood pressure, type 2 diabetes, enlarged prostate, etc. Soil remineralization in the quickest way possible is the key to naturally growing nutritionally super enriched food. Use of biomagnetism to treat water will ensure proper uptake of these essential minerals by the roots.

Today we live in a calcium toxic society with calcified arteries, kidney stones, osteophytes, heel spurs, etc.

The role of calcium as a supplement needs to be seriously reviewed.

My recent submissions to the finding of the United States Preventive Services Task Force (USPSTF) on Calcium and Vitamin D can be reviewed by going to:
<http://www.space-age.com/USPSTF.pdf>

I have also given comments on the Institute of Medicine (IOM) recommendations for calcium at:
<http://www.space-age.com/IOM-Findings.pdf>

For more information on calcium and osteoporosis please go to:
<http://www.space-age.com/osteoporosis.html>
Here you will also find case studies on the reversal of osteoporosis without calcium supplements.

A refresher course in undergraduate and postgraduate calcium, magnesium and vitamin D is included for those who are interested to know more about the latest research on calcium and its toxic effects on the human body.

Blessings,
